PROJECTS

RoboFriends — *Filtered users app*

https://incanlove.github.io/robofriends/

- Developed a React app that would filter through the users using the search box.
- API JSONPlaceholder: Used to create faux users for the app
- API Robohash: Used to create a unique robot for each user, no robot is the same.

Speech recognition — *speech recognition app*

https://incanlove.github.io/speech_recognition/

- Created an app that would respond to 3 different speech prompts.
- Web Speech API: Used for recognizing speech on Google chrome

Music Player — *simple music player*

https://incanlove.github.io/sample_music_player/

- One of my first projects.
- Images and music were stored locally
